

JASON ALEXANDER CHASE

DATA ARCHITECT | ANALYST | CONSULTANT

5215 NE 128th Ave Vancouver, WA 98682 Mobile: 1 (315) 447-3352 Jsncase@Outlook.com

Professional Summary

Seasoned data analyst delivering concise and presentable ad-hoc reporting in addition to dynamically refreshable dashboards for clients including internal executive reporting derived from data I personally acquisition, stage, normalize, and reconcile. Giving preference to manually programming all reporting processes by domain specific programming languages I take ownership of every exception the data or process may contain placing me at an advantage every time I hand off that report. Avoiding automated 5th generation data modeling tools (tableo etc.) greatly increases your client's confidence in your brand and product at that unavoidable moment when asked, "this report doesn't look correct" and your data analyst can answer all questions without hesitation. How does a trusted professional explain the exceptions & anomalies in the data without knowing first hand that they even exist? It's my business to know, without exception, looking to no other solutions to bridge the gap except the ones I create and manage (The buck stops with me). Confidently swift and proficient in SQL server, excel, and web-based reporting with consistent years of automating extract, transform, and load methodologies for data production and OLAP cube-based file interfacing.
